Authorized as Second Class Mail. Post Office Department, Ottawa

VOLUME 35: No. 34

ACME, ALBERTA, THURSDAY

SEPTEMBER 27th, 1956

\$1.50 a Year; 5c a Copy

Mr. and Mrs. Harry Woods of High River, Mrs. Chapman of Stanmore and Clint Twiss of Calgary were Carbon visitors on Wed.

Mr. and Mrs. D. H. McDonald of Calgary were visiting at the home of their sister and brother-in-law, Mr. and Mrs. Les Bramley.

Mrs. Bessie Smith and nephew Neil Cunningham were visiting at the home of Mr. and Mrs. Leon Coates on the weekend.

CARBON BAPTIST CHURCH

Professor Herbert Hiller will be occupying the pulpit of the Carbon Baptist Church at both of its services on Sunday, September 30. Mr. Hiller served for six years as faculty member in the Old Testament department of North American Baptist Seminary in Sioux Falls, S.D., and is at present serving as pastor of the influential Central Baptist Church of Edmonton, Alta.

We are also anticipating the coming of the Rev. Miss Ethel Ruff. Many will remember her from her services here in the Community Vacation Bible School of recent years. She has recovered sufficiently from her polio attack to be able to visit a number of Alberta centres. She will be showing pictures and making comments about her trip to Palestine which she completed before contracting polio. Dates of her coming will be announced later.

Mr. and Mrs. Sam Garrett and Dick are attending the Shriners' Convention in Calgary.

Mr. Carlson of Vernon, B.C. was a visitor at the home of his daughter and son-in-law Mr. and Mrs. Walter Permann.

We understand Grace Garrett was the lucky winner of the 100 dollar door prize at the Drumheller Bingo Friday night.

L.A.C. James Graham and family were visiting at the home of their parents Mr. and Mrs. Chas. Graham.

Mrs. Hein of Calgary is visiting at the home of her brother and sister-in-law Mr. and Mrs. John Harsch.

Mr. and Mrs. James Hunt and family were visitors at the home of their parents, Mr. and Mrs. H. Hunt.

Mrs. E. Sherring returned home on Wed. after spending the past month at the home of her son and daughter-in-law, Mr. and Mrs. Frank Sherring.

Mrs. John Ehnitz and daughters Ema and Louise and their husbands of Lodi, California, Mr. and Mrs. Jacob Ohlhauser of Vancouver were visiting relatives and friends in Carbon and district.

A farewell party was held on Wednesday evening in honor of Mrs. Eli Spry who has left to take up residence at the home of her son R. G. Spry, Calgary.

The guest of honor was presented with a clock radio from the community and a coffee spoon from the ladies of Gamble W.A. for her faithful services. A delightful lunch was then served by the hostesses. The evening closed in the usual manner with the well wishes of all present for a good life in her new home.

Obituaries

DEAN OSWALD TWISS
Dean Twiss, 51, of Carbon, passed away in the Drumheller hospital Monday, Sept. 24.

Born in High River 51 years ago, he leaves to mourn his loss, two brothers, including Clint of Calgary, and three sisters, including Mrs. Harry Woods of High River and Mrs. Chapman of Stanmore.

Funeral services were conducted from the Chapel in the Valley Thursday, Sept. 27 at 3:00 p.m., with Rev. C. E. Martin officiating.

Interment was in Drumheller cemetery. Winter's Funeral directors were in charge of arrangements.

ON THE WAY OUT

Every year, statistics show fewer deaths from tuberculosis in Canada but we shall not be able to boast until, as with small pox, the disease has been wiped out entirely. This can be done

by the efforts of every Canadian performing a simple, painless and cost-free duty about once a year. When one hundred per cent of the population has its annual chest x-ray, then it is reasonable to expect that tuberculosis will be really on its way out. When every incipient case has been discovered—through the x-ray examination—and treated, successfully, the disease should die a natural death.

CLEANING FLUIDS

Many of the cleaning fluids are useful and economical but most of them should not be used in a closed room, especially carbon tetrachloride. The garden or a verandah is the safest place to do this job, where there is plenty of fresh air. It should never be done in a base-

ment where there is no cross ventilation. If used in a room, both door and window should be open. It is always wise to use these chemicals when someone else is in the house, so that in case of accident, there will be someone to give aid.

LIVESTOCK EXHIBIT FOR TORONTO ROYAL

Hon. L. C. Halmrast, Minister of Agriculture has announced the 1956 Live Stock exhibit for the Toronto Royal Winter Fair has been selected and will slightly surpass the record shipment of nineteen carloads exhibited in 1955.

The exhibit will comprise two cars of horses, 13 of beef cattle, two of dairy cattle, two of sheep and one of swine for a total of

20 carloads.

Following is the list of breeders from this part of the county who will exhibit livestock at the 1956 Royal:

Hereford—Victor Watson of Airdrie.

Market Cattle—Keith Halstead of Carbon; Tom Noad, Olds.

Holstein—Pickard & Clark, Carstairs; J. H. Hays, Irricana.

Tamworth—W. A. Greenway & Son, Acme.

FOR SALE—1952 Mercury ½-ton Truck. Good shape. Cash or Trade for Cattle.

—Reuben Keim, Phone 111, Acme.

FOR SALE—Registered Yorkshire Boar, 15 months old.

—Apply C. W. Poole, phone 106, Carbon.

Funny and Otherwise

Mother sent little Willie over to play at his cousin's house. When he returned almost immediately, she wanted to know why.

"Well, something told me Aunt Mary didn't want me," he said.

"Did she say so?"

"No-o," Willie said, "but she put me out on the porch and then locked all the doors."

An American and a Dutchman were talking. "What does your flag look like?" asked the American.

"It has three stripes," replied the Dutchman, "red, white and blue. We say they have a connection with our taxes: we get red when we talk about them, white when we get our tax bills, and pay 'till we're blue in the face."

"That's just how it is here," commented the American, "only we see stars, too!"

An antique collector, passing through a small village, stopped to watch an old man chopping wood with a very ancient axe.

"That's a mighty old axe you have there," remarked the collector.

"Yes," said the villager. "It once belonged to George Washington."

"Not really! It certainly stood up well!"

"Of course," the old man said, "it's had three new handles and two new heads."

The local tavern keeper, who had a reputation for keeping some strong brews, had just closed his shop when he heard a heavy pounding on the door.

"Go away," he shouted. "You can't have any more to drink at this hour."

"Who wants anything to drink," came the answer. "I left here without my crutches."

At an eastern port of embarkation, a navy doctor stopped a sailor who was trying to sneak aboard a very unusual pet, a baby skunk.

"You can't take that below deck," the doctor ordered. "Just think of the odor down there."

"Oh, that's all right," the sailor assured him. "He'll get used to it the same as I did."

FALSE TEETH

That Loosen

Need Not Embarrass

Many wearers of false teeth have suffered real embarrassment because their plate dropped, slipped or wobbled at just the wrong time. Do not live in fear of this happening to you. Just sprinkle a little **FASTEETH**, the alkaline (non-acid) powder, on your plates. Hold false teeth more firmly, so they feel more comfortable. Does not sour. Checks "plate odor" (denture breath). Get **FASTEETH** at any drug counter.

If You're TIRED ALL THE TIME

Everybody gets a bit run-down now and then, tired-out, heavy-headed, and maybe bothered by backaches. Perhaps nothing seriously wrong, just a temporary toxic condition caused by excess acids and wastes. That's the time to take **Dodd's Kidney Pills**. **Dodd's** stimulate the kidneys, and so help restore their normal action of removing excess acids and wastes. Then you feel better, sleep better, work better. Get **Dodd's Kidney Pills** now. Look for the blue box with the red band at all druggists. You can depend on **Dodd's**. 52

Helps You Reduce Swollen Painful Piles

Here is a nice, clean, easy way to get real relief from the nagging distress of swollen, painful piles without the inconvenience of ointments, pile pipes or suppositories.

The secret is in taking just one small **Hem-Roid** Tablet, with water, two or three times a day. Works through effective **INTERNAL** action. Quickly eases constipation, relieves itching, soreness and pain. Helps shrink piles and permits them to heal.

Why suffer needlessly when **Hem-Roid** offers you so much. Get a package today. See for yourself how nice **Hem-Roid** is to use, how effective it is and how much more comfort it will quickly bring you. All drug stores. Low cost. Money refunded if you are not 100% pleased.

Inflation is where ... and how

Appearance of inflationary tendencies in many nations at the same time has characterized the last few postwar years. In the United States and Britain monetary authorities have taken steps to check the expansion of credit, which is partly the cause of price rises. These have been only partly successful.

And now France sees the costs of fighting 1 Algeria mounting while the trade balance goes against France. Higher consumer imports, lower agricultural production caused by the very cold winter, a drain on manpower for the army—all these influences figure in the French situation.

French experts, it is said, fear the effects of more inflation at a time when there might not be an expansion in business and output.

That would be inflation in an absolute sense. The sort of inflation the Western world has known since the war is not that. It is an inflation due mainly to expansion of production.

It is sometimes forgotten that expansion of output is itself inflationary while it goes on. It creates new jobs, puts more money into consumers' hands before the goods they can make reach the market. Meanwhile consumers bid for the good already there. It is only when output overtakes demand that the process halts.

Higher taxes, restriction of installment buying, in addition to raising the price of credit generally, serve as brakes. But the fact that they do not quite stop what we call inflationary trends is understandable. And if they did this they might reverse the trend undesirably.

The goal is stability, but at a high level of output and business and job activity. How to get there and stay there is an art rather than a science, an art of economics that includes a "feel" for intangibles, an alert social conscience, and several other components of the millennium.

WEEKLY BIBLE COMMENT

MATTHEW CONTRASTS CHRISTIAN AND WORDLY WAYS

Four verses of the 20th chapter of Matthew present as vividly and definitely as could be stated the Christian ideal and way of life in contrast with the way of the world. The contrast is so unmistakable it is amazing so many have failed to profit by it.

Even some professing Christians and a few of those associated with the church have been more concerned about pursuing the way of the world in personal ambition for power or material reward rather than in consecrating themselves to the Christian ministry of service.

"The rulers of the Gentiles," said Jesus, "lord it over them, and their great ones exercise authority over them."

Is not that an exact picture of just what has been happening in all countries throughout the ages? To attain to power and to exercise authority has been the goal of men of great abilities and their petty imitators.

Jesus says that this is not the Christian way. In the Kingdom that He came to establish, greatness is not reckoned by lordship and authority, but by the measure of one's capacity and willingness to minister.

Whoever would be first in this Kingdom is the one who most truly serves his fellowmen, and first of all in the Kingdom is Jesus Himself, "who came not to be ministered unto, but to minister, and to give His life a ransom for many."

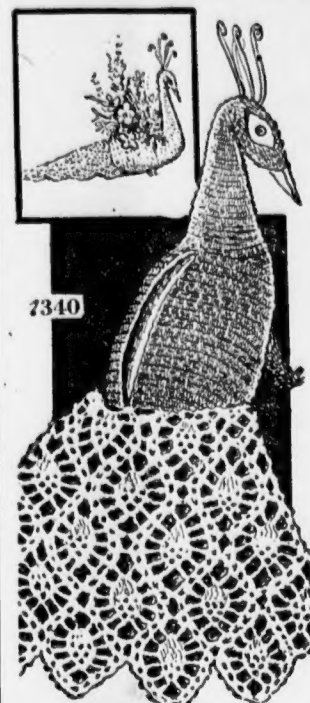

Repeatedly, both by prospect and example, Jesus sought to enforce this lesson concerning true greatness.

The Pattern Shop

Fashions

Crochet centerpiece

by Alice Brooks

A peacock centerpiece for your dining table! So effective—filled with colorful flowers. Body is made of easy single crochet; tail in graceful pineapple design.

Pattern 7340: Crochet peacock centerpiece, 22 inches long in heavy jiffy cotton. Starch stiffly.

To obtain this pattern send twenty-five cents in coins (stamps cannot be accepted) to:

Household Arts Department, Department P.P.L.,

60 Front Street W., Toronto.

Two FREE patterns—printed in the new Alice Brooks Needlecraft book for 1956! Stunning designs for yourself, for your home—just for you, our readers! Dozens of other designs to order—all easy, fascinating hand-work! Send 25 cents for your copy of this wonderful book right away!

Blouse wardrobe

by Anne Adams

Add to your wardrobe with these blouses—a thrifty way to have many smart fashions for summer! Three classic styles, with clever little variations in collars and pockets. Sew them to mix and match with your favorite skirts!

Pattern 4660: Misses' Sizes 10, 12, 14, 16, 18, 20. Size 16 upper version, 2 1/4 yards 39-inch; middle 1 1/2 yards; lower 1 1/2 yards.

This pattern easy to use, simple to sew, is tested for fit. Has complete illustrated instructions.

Send thirty-five cents (35c) in coins (stamps cannot be accepted) for this pattern. Write plainly Size, Name, Address and Style Number and send orders to:

Anne Adams Pattern Dept., Department P.P.L.,

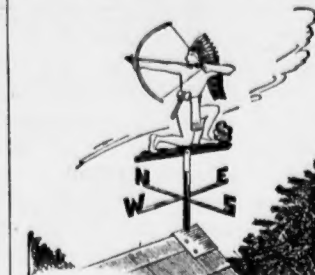

60 Front Street W., Toronto.

Be sure to write plainly your Name, Address and Pattern Number.

IN THE HOME WORKSHOP

Oldtime weathervanes

This Indian weathervane design dates from Colonial times. The 16-inch figure is cut out of wood and painted in true Indian colors. Pattern 241 gives tracing designs for this figure, also a crowing cock

and the direction letters. Method of mounting is clearly shown. The pattern will be mailed for 35c. It is included in the Windmill and Weathervane Packet which contains five patterns for \$1.50.

Kitchen handies you can make

These amusing cutting boards and coasters are a necessity in any kitchen. The tails make good handles when used for serving. Also note there is a hole in each for hanging in some handy place. The coasters are big enough to double as hot dish mats. Everything is complete in pattern 217; price 35c.

Address order to:

Home Workshop Patterns, Department P.P.L., 4433 West 5th Avenue, Vancouver, B.C.

NEW NATO HEAD

Gen. Alfred M. Gruenther says that he will step down from his post as commander of NATO forces on Nov. 20. U.S. Air Force Gen. Lauris Norstad will succeed him at that time.

Agoraphobia is the fear of being in an open place, such as a street.

DIFFERENT SENTENCES

As long as Canadians are able to compare sentences for similar types of crimes and note a surprising lack of uniformity, expressions of disapproval will continue.—Parksville (B.C.) Progress.

More than 87 percent of whole milk is water.

SAFETY FIRST

Children are unpredictable. It's sad but very true. As a driver be responsible. Their safety is up to you.

Salt preserves meat by drawing the water and forming a solution so strong that bacteria cannot grow in it.

Advise stockmen to control flies on cattle

The warm moist weather of the past weeks has produced a large number of horn flies and household flies around stables and pastures, according to W. Erle Roger, livestock specialist with the department of agriculture.

The wide-awake stockman will be abreast of the situation by introducing control measures immediately, he said, which will save him many dollars and much management trouble by keeping animals content.

Beef cattle should be sprayed with a .5 percent solution of DDT powder, applied with power sprayers, preferably under a pressure of 350 pounds per square inch from a distance of about two feet. Smaller herds can be sprayed by hand more economically than by using a pressure system, but the process should be repeated every two or three weeks under normal conditions to keep animals protected.

Methoxychlor must be used in place of DDT when spraying cattle, stables where milch cows stay or piggeries, since the residual effect of DDT can be harmful to humans.

It costs only a few cents per head to treat for flies, but the saving effected in better gains for beef animals, greater milk production and more ease in handling livestock, is considerable.

LOSE A MINUTE—SAVE A LIFE

—Canadian Army Photo

JEEP DRIVING—Most popular part of the mechanical transport course for army cadets is when they get a chance to wheel an army jeep over hill and dale at Camp Dundurn. It's in their seven weeks annual summer training and provides plenty of rugged thrills over roadless country. Here Bill McIntyre, left, of Dauphin and Jim Peacock of Kerrobert hang on for sure as their speedy jeep plunges downhill.

Reader pens "welcome" poem to local weekly

Publisher Charlie Albion of the Springhill (N.S.) Record, usually resigned to receiving beefs from subscribers, had his faith in human nature restored when he received and published the following poetic appreciation of his paper from a subscriber:

WELCOME WEEKLY

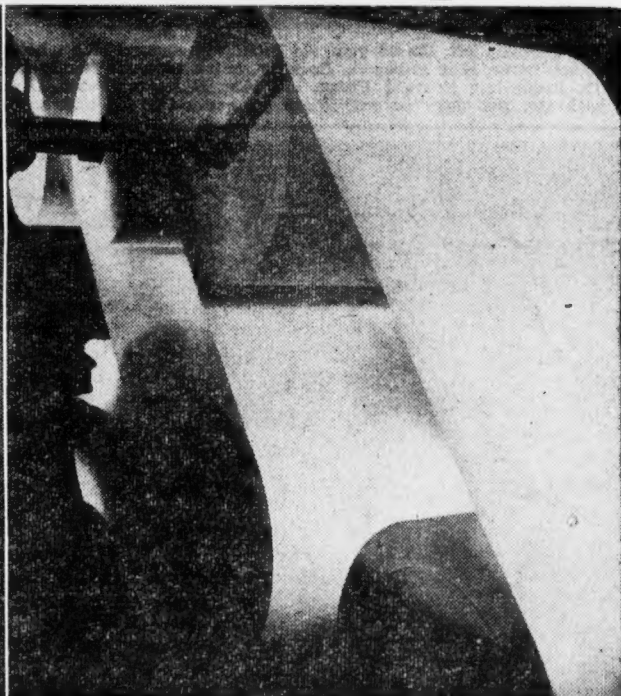

By S. BARLOW BIRD

Weekly paper, local star,
How I ponder what you are!
You're my neighbor with his talk
Of the tallest hollyhock,
And the cheerful chap next door
With his perfect cribbage score.
You're the friendly Cop we greet
In the park and on the street.
You're the hometown golfing green
And the troubled foreign scene.
You're the voice of Home and School
And communal Golden Rule.
True and firm, you've always stood
For a better neighborhood,
Sponsoring a higher gauge
For our youth and our old age.
You're our sons in distant parts
And the joy of clannish hearts,
With your link that waits us to
A remembered rendezvous.
You're the Cub, the Scout, the Guide,
With your code, your smile, your pride.
Yet! the lure of wood and stream
And the new-formed baseball team.
As I ponder what you are,
Weekly paper, local star,
I'm astonished as I find
All the joys you bring to mind.
As I patiently await
You on each arrival date,
Oh that I could truly speak
All you mean to me each week!

Research makes Finer "Fine Paper"

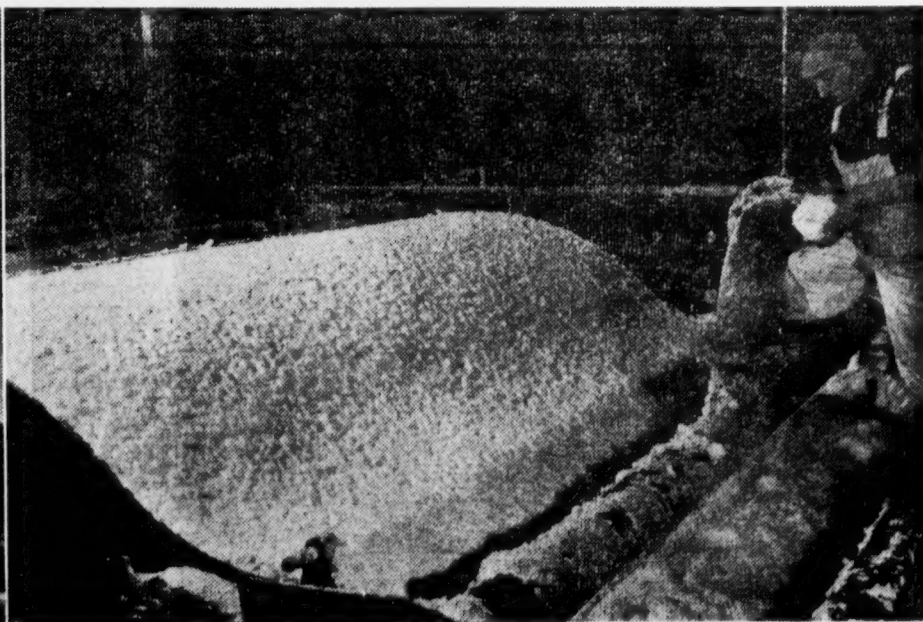

New ways are constantly being sought to make fine paper even better. The demands of the market run the gamut from bank notes and wedding invitations to tea bags and cigarette paper, each with its exacting specifications. Cotton and linen rag, once the basis of top grade bond, is now giving way to chemical pulpwoods.

Fine paper has been produced in Canada for 150 years. The production of quality paper (unlike that of newsprint) is a custom job, often tailored to the needs of individual buyers, who place orders for some 500 varieties.

Quality control is the essence of fine paper making. From pulping stage to finishing process, the paper is subjected to a rigid series of tests and the results charted graphically for ready reference.

Chemical pulp is made by cooking wood chips in an acid or alkaline liquor until only the cellulose fibres remain. Later this "furnish" moves to a huge paper machine where it is felted to form a web. When pressed and dried it emerges as paper.

★ ★ ★ ★

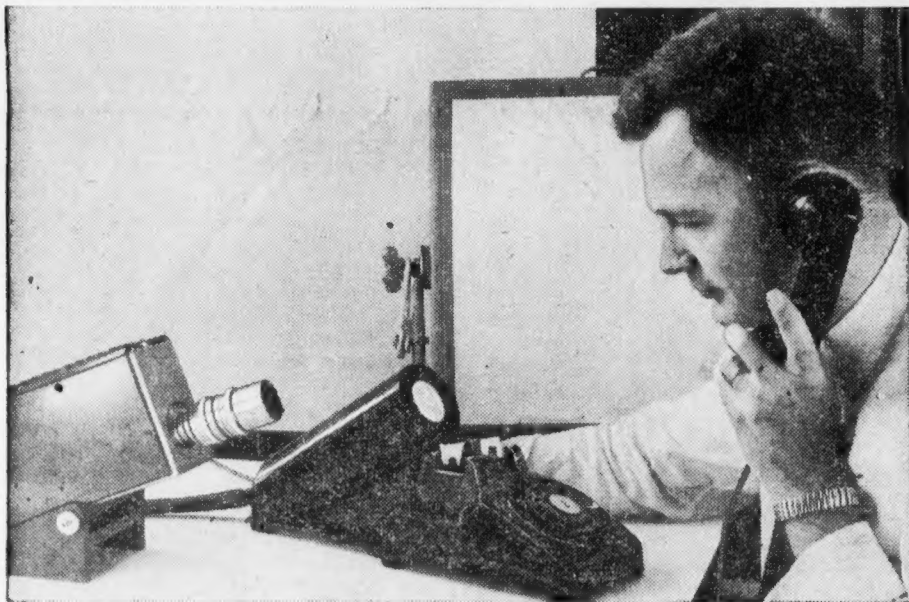

★ ★ ★ ★

EZIO PINZA, left, the 64 year old Broadway musical star who suffered a slight paralytic stroke at his summer home near Ravenna, Italy, is shown with his family as they left New York for Italy last June 12. From left to right Pinza, his wife, Doris, son Peter, 11, and daughter Gloria, 13, and Gloria, five, with the pet dog "Satan." Pinza has cancelled his contract to appear in a play next season.

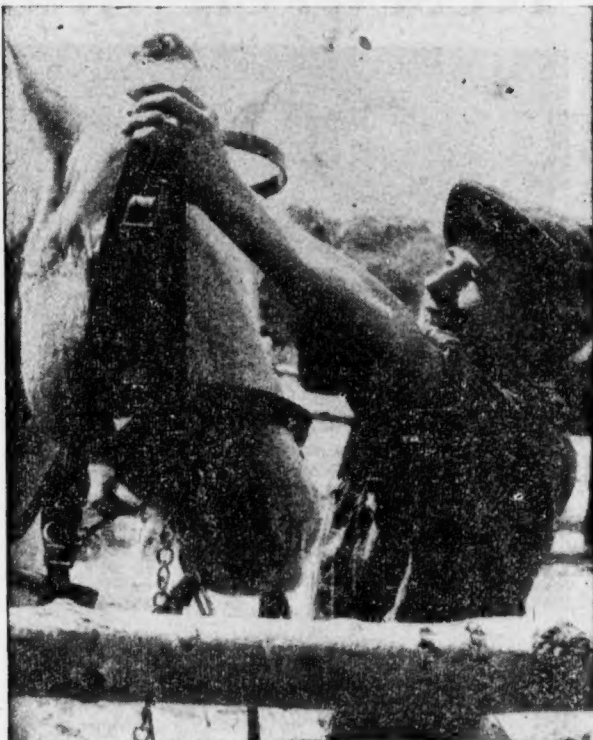

WHOSE PICTURE ARE YOU DIALING?—The hear-and-see telephones of the future aren't far away any more. Floyd K. Becker, a Bell Telephone Laboratories engineer, demonstrates a successful model of a picture-phone system. A two-by-three-inch screen and small transmitter, left, are the principal components of the system, which uses only one extra telephone line on the customer's premises. It will be possible to dial a caller's picture like an ordinary telephone call. Bell engineers have transmitted recognizable pictures between New York and Los Angeles.

WORLD'S LARGEST TANKER—The "Universe Leader," world's largest tanker, hits the water at the Kure dockyard in Japan. The mammoth ship, weighing 84,730 tons and costing more than 10 million dollars to build, will be completed some time in October. An American vessel, it will be placed on the Iran-North America run under Liberian registration.

MRS. ROSE GOLDSTEIN, 70, fingers a hoard of bills, over \$5 000 worth, at her flat in Brooklyn, New York. Police, called in to investigate two recent burglaries in which the partly deaf and blind woman was robbed of \$1,000, found the treasure in crumpled bills at the bottom of an old trunk the key of which Mrs. Goldstein had lost. Dressed in tatters and living frugally the old woman has now agreed to place her money in a bank.

READY TO RIDE—Getting ready for a trail ride at the army cadet camp at Dundurn, Sask., is George Volden of Flin Flon. George is one of 800 boys who take seven weeks summer training and enjoy lots of recreation such as horseback riding.

(An official department of the Canadian Amateur Sport and Physical Fitness Development Service)
By Lloyd Percival

The facts about Royal Jelly

Sports College has done a great deal of experimental work over the years with various food supplements and vitamin-mineral preparations to determine which — if any — had beneficial effects on athletes and fitness in general. During the last few months we have been working with a new natural food supplement known as Royal Jelly. This is the food the worker bees supply to the queen bee and is responsible for her amazing increase in size, productivity and length of life.

It is now believed that Royal Jelly may have some amazingly beneficial effects on humans. A great deal of research has been done by doctors throughout the world, particularly in France, and tests by Sports College under controlled conditions have had some very promising results.

We have found that the majority of people taking it report results ranging from decreased nervousness and more energy to improved appetite and better digestion. Many athletes have become very excited about the possibilities. Best results have been reported by a group of paddlers who recently clocked times better than world and Olympic records and feel that Royal Jelly helped them considerably.

Just how Royal Jelly performs these wonders is not yet completely understood. However, it is high in vitamins, proteins and other elements which are very beneficial, and it is believed that it is the combined effect of all these rather than any one "magic" ingredient which makes it so effective. There is, however, one unidentified element which may contribute more than is now realized, and it also is the greatest and most economical source of pantothenic acid, which is rated as a factor in longevity.

A report has been prepared analyzing these tests with Royal Jelly and we suggest that anyone interested in learning more about it write to Sports College, Box 99, Toronto 1, Ontario.

Football players need strong necks

One of the most dangerously vulnerable spots in the average football player's physique is his neck. An injury in this spot often is serious, yet examination shows that the average high school football player, and many at university level too, is not nearly well enough developed in the neck for

When harvest is in sway mice will play

Farmers face many natural hazards when rushing through the work of the harvest season. Wet weather, balky tractor motors, muddy ground . . . all can contribute to lost days in getting in the crop.

But Dick Damron of Bentley was held up late last week by a mouse nest! When he started his self-propelled combine motor last Friday, the engine purred like a kitten for a few revolutions, then stopped with a shudder! It took valuable time to discover the seat of the trouble.

Mice had found their way through a small hole in the exhaust pipe, crawled up the pipe to nest and were safe and comfortable from the outside world installed in the manifold or in valve seats.

New definition of a typical father: A man whose daughter marries a man vastly her inferior mentally but then gives birth to unbelievably brilliant grandchildren.

Warning to reckless drivers: It takes hundreds of nuts to hold a car together, but it takes only one of them to scatter it all over the highway.

his own safety.

Here's an exercise that will develop the kind of muscles you need. Lower your head until your jaw rests on your chest. Clasp your hands behind your head. Move your head up and back as far as possible, resisting this movement with your hands. Relax, drop your chin to your chest again and repeat. Do this eight or ten times, then rest, and do another set. Repeat this drill several times every day.

The Canadian Amateur Sports and Physical Fitness Development Service is a nationwide project operated by Sports College to improve standards of physical fitness. Further information about CASPFDS may be obtained from Sports College, Box 99, Toronto 1.

UPPER UPPERCRUST: Meet "Prince" Robert Bohan Court-enay, of the "Byzantine Umpire." He's one of the more colorful members of New York city's more-or-less permanent hobo colony. Occasion for this "command" dress appearance was one of his frequent forays to offices of the Bowery News, official organ of the gentlemen of the road.

CANCER CURE? NOT YET

Cancer cure isn't to be expected overnight from research now going on with special cancer "serum," reports The Financial Post. Medical researchers say results are still very inconclusive with no evidence so far that the serum can cure; they are doubtful about the extent to which the serum arrests the disease. It will be one or two years at least before more definite findings are available.

Stubborn tea stains in a teacup vanish when scoured briskly with table salt.

Boric acid is dangerous

Boric acid, commonly called boracic acid, is formed by the action of strong acids on borates. It is usually regarded as a harmless household remedy for many minor troubles, useful for bathing eyes or wounds or as a dressing on burns. But boric acid is a dangerous poison if taken internally or absorbed from strong solution or repeated doses. In case of boric acid poisoning the patient should have medical attention immediately.

Here's the Answer

Science produces deadly poisons but bugs keep getting tougher

Are you a victim of Twentieth Century jitters? Have you sometimes wished to be a tiny insect so you could hide and avoid an untimely atomic death?

If so, forget it. Insects, today, are in much more danger of losing their lives than is homo sapiens. When insecticide experts first declared war on bugs, it often was

the bug that had the last laugh. If a new discovery annihilated the carpet beetle (anthrenus schrophulariae to you), the bill bug (calendra maidis), or the codling moth (carpocapsa pomonella), is all probability it had no ill effect on such a lowly creature as the periplaneta americana—known to one and all as the cockroach.

"With the discovery of DDT," says Ralph Martin, a U.S. insecticide manufacturer, "scientists thought that they had the battle of the household pests licked."

They did, too—just for a while. Martin's firm was the first to use DDT in their insecticide. This was in 1945 and it knocked the insect world for a loop.

Time passed, as they say in the flickers, and bugs everywhere started to recover. Like an habitual drinker who needs more and more alcohol to get that feeling, the tougher members of bugdom had started to develop an immunity to DDT. It required more and more of the stuff to put them out of their misery. Then came the hour when they could take a swig of the poison—and live to talk about it.

Exterminating firms were frustrated, to say the least. Meetings were called and science was challenged to produce something more potent and destructive than DDT.

"They came up with the answer in 1947," Martin says, "and we started adding a substance called chlordane to our insecticides."

What the atom bomb was to man, chlordane must have been to insects. Casualties were extremely high. However, once more the DDT story was repeated. Little by little, chlordane lost its potency as the bugs got used to it.

There came a time when the first bug survived after frolicking upon a chlordane-covered surface. Only one was needed to lead the way. Other bugs followed suit, and they continued to live until meeting with a natural death.

It was in the last half of 1955 when science again came to the aid of man. A new killer was discovered, called dieldrin.

"This ingredient," said the scientists, "is 28 times as deadly as DDT."

"They definitely have something there," agrees Martin, who, having been the first to use DDT, then chlordane, also was the first to try dieldrin. "So far in our experimentation," he adds, "not one bug was able to survive when exposed to this new ingredient."

Not only does the new bug killer spell sudden death to one and all who come in contact with it, but it also has a delayed reaction. Once a surface is sprayed with the dieldrin-enriched product it will prove fatal to any bug that walks over it months afterward. Martin and his colleagues are as certain that this substance really kills that they are giving a \$25,000 award to anyone who comes up with a bug that can live through a spray bath containing the new formula "D".

Child in hospital

When it is necessary for a child to enter hospital, there are several things that should or should not be done, if the youngster is not to be frightened or feel that he has been deceived. His confidence will be helped if he is told the truth about staying in bed; he should not be given the idea that it will be a sort of picnic. He should be told that his stay in hospital for a time will give him better health. The age of the youngster will decide just how much help he will need in accepting hospitalization. A folder entitled "Preparing Your Child for Hospital" can be obtained free of charge from your local or provincial health department.

101 MILES LONG

Some 101 miles long, the Suez canal, an international waterway, links the Mediterranean and Red seas. It flows through Egyptian territory.

Bogey man of Bugdom. When dieldrin first was tested in anti-malaria projects in the Philippines, sprayers wore goggles, respirators and gloves such as this, because its effect on humans was unknown then. Tests proved, however, it was harmless to humans.

First steel mill locates in mid-western Alberta area

Since it started operation in September, 1955, Premier Steel Mills Limited, on the outskirts of Edmonton, has shipped more than 15,000 tons of merchant bar steel to markets in Alberta, Saskatchewan and the British Columbia interior.

These markets were previously served by mills at Winnipeg and the West Coast, and represent largely new markets that have opened up as the result of in-

creased industrialization of the west and Alberta, and as a consequence of savings in shipping costs.

Peak annual capacity for the 66-foot long, 72,000 square foot mill is presently 35,000 tons but plans are being made to double the capacity with the addition of a second melting furnace in 1957. An additional 100 persons will be employed to bring the labor force up to 350.

The mill, only one between Winnipeg and the West Coast, operates on the "flow-line" plan, and uses scrap steel stripped of zinc, brass, lead and copper. Shipped to the plant from all over the province, the scrap is cut into required lengths and fed into an arc furnace, designed in Italy and built in England.

Three or four scrap recharges are required to produce a 15 ton "heat" in the arc furnace. Three graphite electrodes transmit the arc into the meal to generate sufficient heat for melting. A number of tests are taken during the melting process to assure the steel is of the required specifications. Alloying ingredients are added during melting and pouring to bring the steel to meet its desired quality. About three hours are required to melt and pour one "heat."

The white-hot steel when at 3,000 deg. F is poured into ingot molds. Removed after a cooling period, they are fed into a pusher-type reheat furnace, the only one in Canada fired by natural gas.

The ingot is manipulated by conveyors and tongs through openings in various sets of rolls and gradually is transformed into a stipulated bar size.

The faces of the rolls are cut and scored to produce corrugated flat or channelled and angular shapes, whichever may be required.

The bars, still red hot, are delivered from the rolling mills by conveyors to a wide platform known as the "hot-bed" where they are straightened, cooled, cut by shearing machines, and bundled, ready for shipment.

GEMS OF THOUGHT

BOOKS

A house without books is like a room without windows.

—Horace Mann

Books are the lighthouses erected in the great sea of time.

—Edwin Percy Whipple

All education should contribute to moral and physical strength and freedom.

—Mary Baker Eddy

Let us be clear about the role of the classics: they are worth studying as examples of how to think, not of what to think.

Jacques Barzun

To destroy the Western tradition of independent thought it is not necessary to burn the books. All we have to do is to leave them unread for a couple of generations.

—Robert A. Hutchins

HERE'S HEALTH

WHenever you find you have a cut, MAKE SURE THERE'S NO INFECTION, AND IN THIS WAY YOU'LL ALWAYS FIND YOU'RE SURE OF HEALTH PROTECTION.

Department of National Health and Welfare

Honey and how to use it

Honey carries the aroma and flavor of the flowers from which it was gathered, and contains in addition mineral matter, traces of protein, and some of the vitamins according to an article appearing in the O.A.C. Review and Alumni News.

The color and flavor of honey vary with the source of nectar. Most honeys are blended to a certain extent, since it's impossible to prevent bees from visiting different kinds of flowers during a given period.

The lighter honeys are usually milder in flavor while the darker honeys are stronger in flavor. White honeys are obtained from clovers, fireweed, raspberry, and occasionally other fruits. Golden and amber honeys are obtained from red clover, rape, golden rod and mixtures of other fall flowers.

Honey is sold as comb honey, liquid honey, or granulated honey.

Comb honey is honey in the comb, usually in square sections, as it was stored by the bees. It is served just as it comes from

the section, or cut into individual pieces. The "chewiness" of the wax adds to its attractiveness.

Liquid honey is obtained by uncapping the comb and extracting the honey by centrifugal force. If warmed slightly, liquid honey will pour from a container in a thin, fine stream. All Canadian honeys will granulate quite readily and are easily reliefsed by being warmed in a double boiler or placed in a pan of warm water.

Processed honey, sometimes just called "pasteurized" honey, is honey which has been allowed to granulate under controlled conditions in order to produce a smooth-texture which will spread readily. This honey is not changed in any way except in size crystals. The smaller the size of crystals, the smoother is the texture of the honey. In Canada, honey is generally preferred in this form.

If allowed to granulate naturally, honey may vary in texture from fine to very coarse, or half liquid and half granulated.

Since honey is a delicate natural food, it should never be heated longer than necessary, and if it is to be reliefsed the heating should always be carried out in a double boiler. Once the honey is liquid it should be cooled as rapidly as possible.

If honey is left exposed to a damp atmosphere it takes up water and becomes more dilute. It then has a greater tendency to ferment, unless it has been pasteurized. All honey therefore should be kept in a dry atmosphere. Solid honey tends to liquefy at high temperatures and should be stored in a cool place, but not in a refrigerator. At low temperatures liquid honey and comb honey tend to crystallize and therefore should be kept at room temperature.

Honey can be used in many ways—as a spread, as a dizzle over sauces or fresh fruits, in baking of cakes and cookies (where it tends to keep the baked products moist) and even in preserving.

"CYPRIUM AES"

The ancient Romans called an orange-yellow metal mined on Cyprus "Cyprum aes" or Cyprian brass. This term was later contracted to "coprum" and then to the English word "copper."

GUZZLING GROUNDHOG: Hitting the bottle at a tender age is a month-old groundhog, pet of the Harold Moon family of Cleveland, O. Holding that bottle—of milk—with the poise of a veteran, the adopted woodchuck is keeping a wary eye out for free-loaders. The Moons' cat dug the animal out of the ground before its eyes were opened, and is rearing it along with her kittens.

The 10 Commandments of Safety

- 1 Treat every gun with the respect due a loaded gun. This is the first rule of gun safety.
- 2 Guns carried into camp or home, or when otherwise not in use, must always be unloaded, and taken down or have actions open; guns always should be carried in cases to the shooting area.
- 3 Always be sure barrel and action are clear of obstructions, and that you have only ammunition of the proper size for the gun you are carrying. Remove oil and grease from chamber before firing.
- 4 Always carry your gun so that you can control the direction of the muzzle, even if you stumble; keep the safety on until you are ready to shoot.
- 5 Be sure of your target before you pull the trigger; know the identifying features of the game you intend to hunt.
- 6 Never point a gun at anything you do not want to shoot; avoid all horseplay while handling a gun.
- 7 Unattended guns should be unloaded; guns and ammunition should be stored separately beyond reach of children and careless adults.
- 8 Never climb a tree or fence or jump a ditch with a loaded gun; never pull a gun toward you by the muzzle.
- 9 Never shoot a bird at a flat, hard surface or the surface of water; when a practice, be sure your back stop is adequate.
- 10 Avoid alcoholic drinks before or during shooting.

Coal industry not lost

(From The Brandon Daily Sun—July 25, 1956)

With the advent of natural gas in such large quantities the coal industry in Alberta has taken a terrific beating. Hundreds of mines have been shut down, and employees forced to seek other employment. Once thriving coal centres have become mere ghost towns. Even at the present time the future for industry looks bleak.

However, men "at the top level" in the coal industry have a different opinion. They readily admit that for the present the industry will find tough sledding, but in the not too distant future the fortunes of the coal industry will begin to rise.

"Coal," said the magazine Business Week some time ago, "is energy. And energy is the fastest growing part of the economy . . . So if coal's future isn't tremendous, no one's can be . . ."

On the same subject the Christian Science Monitor goes on to say that regularly now coal operators, coal carrying railways, and the miners' union and an "unprecedented partnership" — are indicating the setting up of a giant shipping corporation to expedite coal to a growing European market.

Business Week cites the following reasons for its optimism for coal: Price trends of gas and oil now favor coal (for energy, not convenience); coal has written off the railroads (locomotion) and adjusted to the loss; coal mining is in the front line of productive efficiency; big customers are moving from the distant rail sidings to the mine mouth; coal as a source of synthetic products and automatic fuels promises to rival gas as simply a "solid fuel under boilers."

So while the coal industry seems at present in a precarious state, there is good reason to believe that its future is due for a tremendous surge. It is too big an industry, too valuable an employment source and too rich a natural resource to let languish in its present state. The signs are now out that material improvement is on the way.

More care -- less accidents

(From The Swift Current Sun—July 25, 1956)

The Sun makes no apologies for drumming away the past few weeks on farm accidents, because the Government of Saskatchewan, cognizant and disturbed at the great loss of life and upsurge of costly accidents on farms has proclaimed this week as "Farm Safety Week". We feel, like the government does, that this is a project in which we can assist, and that is by publicity to try and make farm people more urgently aware of the situation.

Some accidents, of course, will always occur despite precautions and safety education, but industrial Canada has proven that safety education on the whole does pay off. The incidence of accidents in industry, where there is a tremendous amount of dangerous machinery in action, has been decreasing every year. The railways found out it paid them well to establish a safety division which does nothing else but teach "Be Careful". But there is still much room for improvement on the farms.

There were 86 fatal accidents on farms of Saskatchewan in 1955. There were 23 of them due to accidents with tractors, the largest number due to "upsets". Twelve people died by drowning on farms in the same period. These are statistics which should make people think not only for their own sake but for their family sake. And that is wholly the idea behind Farm Safety Week. Soon harvest will be in full swing again in this province, and it would be a fine thing if farmers would exercise more care and make 1956 a banner year in decrease of accidents.

Pan-American Link

Engineers are surveying the final, 250-mile gap in the Pan-American highway linking Alaska with Argentina. To be located in the Panamanian jungles, the link would cost an estimated 110 million dollars to complete, they estimate.

Quick Canadian Quiz

- Of these explorers, which first reached Canada: Verrazano, Cartier, Cabot, Corte-Real?
- Name the second largest cities in British Columbia, Ontario, Nova Scotia.
- This year will Canadians pay more to the federal government through personal income taxes or through indirect taxes?
- In the most recent federal election, 1953, there were 5,791,825 votes cast. This represented what proportion of the voters on the lists?
- Which of these countries had the largest volume of exports to Canada in 1955: The Netherlands, France, Japan, Australia, India, Brazil?

ANSWERS TO QUICK QUIZ

5. Japan. 3. Indirect taxes \$1,673 million, personal income taxes \$1,265 million. 1. Cabot 1497, Corte-Real 1501, Verrazano 1524, Cartier 1535. 4. Less than 68 percent. 2. Victoria, B.C.; Hamilton, Ont.; Sydney, N.S.

(Material prepared by the editors of Quick Canadian Facts, the pocket annual of facts about Canada.)

HEAR! HEAR!

There's nothing wrong in wanting to get ahead in life, but unlike driving, it's not good form to blow your horn when passing the fellow in front.

RUSSIAN ACCENT: Distinctly Russian in flavor, Genevieve Fath's eye-catching coat is done in a muted plaid of mauve, green and black, trimmed in mauve-dyed Persian lamb. The matching toque is dyed to the same shade.

ARTIFICIAL SURF

Germany's North Sea resort of Norderney has an indoor swimming pool with a rolling surf artificially formed by an electrical device. Some quarter-century old, it's unique, says the German Tourist Information office.

Strictly Fresh

"You should have been living in Hoboken when I was a boy," reminisced old Mr. Schultz. "The water supply was never adequate. People had to boil and reboil it so they could use it over and over again."

"Didn't you get sick from it?" asked somebody. "No," Mr. Schultz, "was the reply. 'We drank nothing but beer!'"

During these golden days, treat your nose to the spicy scent of pumpkin pies drifting from homes all along your street—as housewives pop frozen, prepacked goodies into the oven.

Sure sign of autumn — the stores will soon be showing spring fashions.

Mr. Goldstein treated himself to a new hat, but his wife failed to approve of his selection. What she said, in fact, was "Moe, in that hat, you really look like a first-class idiot."

"I know," agreed Mr. Goldstein sadly, "but when the salesman jammed it on my head and led me to a mirror, I looked too stupid to argue with him."

Make these simple POTATO SCONES tomorrow!

Sift together into bowl
1 3/4 c. once-sifted pastry
flour
or 1 1/2 c. once-sifted all-
purpose flour
5 tsp. Magic Baking
Powder
3/4 tsp. salt
Cut in finely
1/2 c. chilled shortening

Combine
1 well-beaten egg
1 c. cold mashed potatoes
Blend well with a fork; then
blend in
1/2 c. milk
Make a well in dry ingredients
and add potato mixture.
Mix lightly with fork, adding
milk if necessary to make a
soft dough. Knead for 10
seconds on a lightly-floured
board.

Divide dough into 3 parts and
pat each part into 3/4-inch
thick round. Mark each circle
into quarters with the back of
a knife. Place on greased
cookie sheet. If desired, brush
scones with milk and sprinkle
with sugar.
Bake in hot oven, 425°, 18 to
20 minutes.
Yield: 12 scones (3 rounds).

You get lighter, more
delicious baked goods
because Magic's steady,
even rising action brings
out all the best
in all your
ingredients.

SCHOOLS OF AGRICULTURE AND HOME ECONOMICS

The Alberta Department of Agriculture operates three schools of Agriculture and Home Economics—Olds, Fairview and Vermilion.

The only cost to Alberta farm residents is room and board, there being no tuition charged. The schools open for the 1956-57 term on October 30th.

Requirements are as follows:

Boys registering for the Two Year Course must have passed their 17th birthday by December 31st of the year they apply. Minimum age for girls, and Two in One boys, is sixteen years at registration. A new One Year Course for all girls is offered this fall. It features courses in (including office procedure) in the Typing and Bookkeeping (including mornings and Home Economics lecture-labs in the afternoons. Application forms are available from this office and from the Principals at the three schools.

If you desire further information regarding the courses do not hesitate to contact this office

FORMER CARBON MAN PRODUCTION FOREMAN

The appointment of T. B. Pengilly as Production Foreman in the Calgary Division, Shell Oil Company, was announced recently by A. T. Rylands, Division Production Manager. In his new position, Mr. Pengilly will be in charge of production in Shell's Fenn-North Big Valley field, succeeding Jack Gray who has returned to the United States.

Mr. Pengilly was born in Mayburt, Alta. and was educated at Sterling. He joined the company in 1950 and has served in various production assignments at Jumping Pound, Okotoks, Carbon and Fenn-Big Valley.

SOME PUNKIN

Albert Klassen is displaying a huge pumpkin grown on his farm which weighs 67½ lbs. and a turnip which weighs 22 lbs. The pumpkin is on display in the Sentinel window and the turnip at Reliable Feed Mill.

CHRISTIAN SCIENCE

Man's God-given ability to cope successfully with fear, sickness, and all discord will be emphasized at Christian Science services this Sunday.

Keynoting the Lesson-Sermon entitled "Unreality" is the Golden Text from II Timothy (1:7): "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind."

The account of Jahaziel's prophecy and the overthrow of the enemies of Jehoshaphat (II Chronicles 20) will be included in passages to be read from the King James version of the Bible From "Science and Health

with Key to the Scriptures" by Mary Baker Eddy the following selection will be among those read (228: 25-27): "There is no power apart from God. Omnipotence has all-power, and to acknowledge any other power is to dishonor God."

PIONEER TEETH

Although the child's first teeth are temporary, they should not be regarded as unimportant. Usually, their condition affects the next and permanent set. If one of the baby teeth is misshapen, badly decayed or misplaced it will cause trouble with the second tooth, perhaps forcing it out of line. As early as three years of age a child may have
